OBJECTIVE

Senior Full Stack Developer with solid experience building scalable, resilient, and high-performance applications. Throughout my career, I have specialized in architecting and implementing end-to-end solutions, combining a modern front-end ecosystem (React, Next.js, Styled-components) with robust and efficient back-ends (Node.js, NestJS, TypeScript, Python/Django).

I currently work at Aposta Premia, tackling high-availability, performance, and security challenges in a dynamic, high-traffic environment. My background includes strategic experience across major ecosystems, such as the renewable energy sector at Omega Energia and historical research and documentation projects at IFAL.

Beyond my expertise in software engineering — covering database modeling, API design, architectural patterns (such as MVC), and automated testing — I stand out for my ability to translate complex business requirements into elegant technical solutions, as well as for actively collaborating in the team's technical growth.

EXPERIENCE

Senior Developer — Aposta Premia (Mar 2026 — Present)

Remote

- Lead the platform's architectural evolution, driving the migration from a Node.js monolith to a distributed microservices-based architecture.
- Guide the technical team on design decisions, domain modeling, and definition of contracts between services.
- Develop and maintain the platform's backend (Node.js, NestJS, MongoDB), focusing on critical systems such as the promotions engine, cashback, postbacks, and partner integrations.
- Implement conflict-sensitive business rules (e.g., resolving cashback conflicts between automatic and activated promotions, ensuring operational uniqueness of promotions per partner).
- Define and safely execute production data migrations.
- Work across the full feature lifecycle: requirements gathering, modeling, implementation, QA, and post-deploy monitoring.
- Configure and manage AWS infrastructure resources (IAM, EC2, CloudWatch, Lambda, CloudFront) and CI/CD pipelines for platform deployment and monitoring.

Mid-level Full Stack Developer — Aposta Premia (Sep 2025 — May 2026)

Full-time

- Full stack development on a high-traffic platform, focusing on performance, security, and scalability.
- Active participation in critical product features and partner integrations.

Mid-level Full Stack Developer — Serena (Ômega Energia) (Sep 2024 — Aug 2025)

Full-time

- End-to-end solution development in the renewable energy sector, using React, Next.js, Node.js, and NestJS.
- Implementation of automated tests and code quality practices.

Junior Full Stack Developer — Serena (Ômega Energia) (Sep 2021 — Sep 2024)

Full-time

- Development of web applications using React, Next.js, NestJS, WordPress, TypeScript, and PostgreSQL.
- Use of libraries such as React Hook Form, Tailwind, Material UI, Mantine, and Puppeteer.
- Collaboration on micro-frontend architecture and agile practices.

Freelance Developer — Workana Platform (May 2024 — Present)

- Development of applications with React and page SEO optimization.

Back-end Developer — IFAL Scholarship (Jan 2020 — Sep 2020)

- Worked on the back-end of the Hemeroteca project, a historical documentation system, using Django, Python, and JavaScript.
- Participated in the development of a platform for sharing and creating research projects.

EDUCATION

Systems Analysis and Development — Fiap

2021 – 2023

Technical Degree in Information Technology — Instituto Federal de Alagoas

2017 – 2020

ADDITIONAL TRAINING

School of Net

Advancing with React – Understanding Components

PHP with MVC

Dart for Beginners

Authentication with Laravel

REST APIs with Django

Web Crawling with Python

HTML5

Python – Best Practices and File Management

CSS3
Getting Started with React.js
PHP with PDO
Object-Oriented Python
Object-Oriented Java
Java 8
Introduction to Hibernate

Alura

Space Invasion 2
React: Optimizing Performance
CSS: Arranging Elements with Flexbox and Grid
TypeScript Part 1: Evolving your JavaScript
React: Integration Testing and Mocks on the Front-end
Next.js: Exploring the Framework
React JS: Write Tests with Jest and Testing Library and Ensure Front-end Functionality

gamaAcademy Program

Hiring Coders Training Program

SKILLS

Front-end: HTML5, CSS3, SCSS/Sass, React.js, Next.js, Vue.js, TypeScript, Styled Components, CSS Modules, Tailwind, Material UI, Bootstrap, Micro-frontend

Back-end: Node.js, NestJS, Django, Python, Java, Spring Boot, Go, REST APIs

Messaging: RabbitMQ

Databases: MongoDB, PostgreSQL, MySQL, Redis (cache & queues)

Testing: Jest, Cypress, Testing Library

Tools & Others: Git, GitHub, Linux, WordPress, Puppeteer, Web Crawling, AWS (IAM, EC2, CloudWatch, Lambda, CloudFront), Docker, CI/CD

Methodologies: Agile (Scrum/Kanban), Microservices Architecture, MVC, Domain Modeling

ADDITIONAL ACTIVITIES

Mentor — Web Developer Extension Course, IFAL, 2019

- Taught basic computing through front-end fundamentals (CSS and HTML).
